EXPERIENCE

- Associate Developer
Thoughtworks
- Jan 2026 – Present
Pune, Maharashtra
- Develop backend services for an **AI-powered order processing system** using **C#, .NET**, REST APIs, and Azure services.
 - Engineered an **SOP Interpretation service** that parses updated SOP documents with **AI Agents**, retrieves account data, and generates updated rules for order processing.
 - Built a **background CronJob service** to detect SOP changes, trigger the interpretation workflow, and persist the latest parsed rules for downstream processing.
 - Implemented **Least Connection Load Balancing** in the application Orchestrator to distribute AI workloads across **Azure Foundry** instances.
 - Addressed **long-running Azure Foundry Agent requests** by designing a polling-based workflow for asynchronous processing across the SOP Interpretation service and Orchestrator.
 - Evaluated workload capacity through **Service Bus concurrency, AKS replica, and TPM performance testing**; restructured functional tests using **TDD** to automate end-to-end workflows.

- Software Development Intern
Dair.cloud (Subsidiary of NIC INFOTEK)
- Jan 2024 – Jul 2024
Remote, Florida, USA
- Parsed **Camunda BPMN XML** generated by the frontend to extract workflow nodes and connections, designing a **graph-based schema and APIs** for workflow transitions.
 - Owned the end-to-end implementation of a **global search workflow**, covering Elasticsearch initialization, indexing, updates, retrieval, and frontend result redirection across the application.
 - Built **RBAC** for multi-branch roles and permissions, optimizing API payloads for efficient data transfer.
 - Contributed to backend architecture and design discussions, transitioning from frontend to backend development after proposing workflow improvements.

EDUCATION

- Asansol Engineering College
B.Tech in Computer Science and Engineering (AIML)
- 2021 – 2025
CGPA: 8.9

PROJECTS

- CloneGPT — Full-Stack AI Chat Application
- 2025
- Built a **full-stack AI chat application** using Next.js and OpenAI API with **real-time streaming responses** and persistent conversation memory using mem0.
 - Implemented **file and image uploads** using Cloudinary and Uploadcare, with Zustand-based client state management and MongoDB/Mongoose persistence.
- Medimate — Backend for Cervical Abnormality Detection
- 2025
- Built a **FastAPI backend** implementing JWT authentication, REST APIs, PostgreSQL data models, and role-based access control for users, reports, and diagnoses.
 - Integrated a **CNN inference pipeline** with secure image uploads, file validation, and custom middleware for real-time predictions and Flutter client integration.

TECHNICAL SKILLS

- Languages: C++, Java, Python, C#, JavaScript, TypeScript
- Backend: .NET, Node.js, Express, FastAPI, REST APIs
- Frontend: React, Next.js
- Cloud & Infrastructure: Azure, AKS, Docker, Azure Service Bus, Azure DevOps
- Databases: PostgreSQL, SQL Server, MongoDB, Azure Cosmos DB
- Tools: Git, GitHub, Elasticsearch

ACHIEVEMENTS

- LeetCode Knight** with a rating of **2003**, ranked in the **top 2.7% globally**.
- Global Rank 438** among 400,000+ participants in the **TCS CodeVita** international coding competition.
- Solved **1500+ DSA problems** across LeetCode, Codeforces, and HackerRank.
- Achieved** contest rankings including Top 600 in LeetCode Weekly Contest and Top 800 in **IICPC Codefest 2025**.

LEADERSHIP

- Led the **Google Developer Student Club** at Asansol Engineering College, growing the community to **1300+ members** and organizing **20+ technical events** with a 15+ member core team.
